DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

Drawings

2. Corrected drawing sheets were received on 11/17/05. These drawings are acceptable.

Claim Objections

3. Claim 4 is objected to because of the following informalities:

In line 3 of claim 4, "substantially equal" should be --is substantially equal--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Ajima et al. U.S. Patent 5,390,199.

Regarding claim 1, Ajima et al. disclose a communication system in Figure 1B where a data signal is received at terminal 7 of a second microcomputer from a target system considered to include a first microcomputer (col. 12, lines 36-41), where the data signal is shown in Fig. 3 to include a frame having a plurality of bits for a period T_B , followed by a period where no data is transmitted T_C , for a total transmission period T_F (col. 15, lines 16-30), where the data is stored

Art Unit: 2637

in memory (storage circuit 18) and read from memory according to timing pulses during the output operation period shown in Fig. 3 and subsequently processed, and where the period T_B corresponds to a period of about 280 bit periods, which is less than half of the transmission period $T_F=840$ bits (col. 15, lines 31-40).

Regarding claim 2, the period between timing pulses, one pulse shown in Fig. 3 as the period during output operation of FIFO, is substantially equal to the transmission period T_F .

Regarding claim 3, data is readable from memory during the period denoted by the output operation of FIFO shown in Fig. 3, which is considered to correspond with a period between timing pulses.

Allowable Subject Matter

6. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 2637

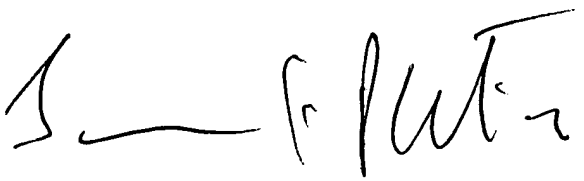

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
